

THE REGIONAL ENVIRONMENTAL CENTRE FOR CENTRAL ASIA

**ENVIRONMENTAL NGOs
IN CENTRAL ASIA**

Almaty, 2003

We aim to protect the environment facilitating and developing partnership and cooperation among NGOs, governments, business communities, donors and the general public. We also encourage public's involvement into environmental decision-making process.

The findings of this survey may be used only with a reference to the source.

BOARD VICE-PRESIDENT'S MESSAGE

Dear colleagues!

«Environmental NGOs in Central Asia» reference book is considered to be a result of the joint activity of CAREC, NGOs, initiative groups and regional public representatives. The work performed was aimed at achieving the concrete objective: to make a research on Central Asian environmental public organisations interaction, their perspectives and priorities.

No doubt, the goal should be significant for the society and support its initiatives and efforts, focused on a sustainable development of our countries and public involvement into environment protection activity.

This kind of editions is rare for Central Asia, because of the raised issue specificity. We did our best to cover the basic spectrum of the environmental NGOs activity and their new directions, appropriate for the concrete situation. The reference book contains the data on the non-governmental organisations working on social and environmental problems in five Central Asian republics: Kazakhstan, Kyrgyzstan, Tajikistan, Turkmenistan and Uzbekistan.

Time and your comments will let us know whether we succeeded in this work. We will highly appreciate and consider any of your proposals.

I hope everyone interested will find information presented useful.

The process of NGOs transformation and renovation is a continuous one: new NGOs are intensively appearing, while some of them leave the scene. Moreover, there are a lot of difficulties with the database forming and because of the reasons listed this edition can not be universal.

We would like to thank all the participants involved in this research. We admire with their sincere attitude to the environmental problems, they consider not a duty, but a soul call!

Hope for further cooperation,

Yours faithfully,

Sestager Aknazarov

Vice-president of CAREC Board Members.

INTRODUCTION

One of the principal priorities within the program of the Regional Environmental Center for Central Asia is providing support to the civil society initiatives and efforts aimed at sustainable development in CA, as well as ensuring community involvement in environmental efforts.

Cooperation with non-governmental environmental organizations is, undoubtedly, the most effective tool in addressing the environmental issues of our region.

The CAREC conducted a survey of non-governmental organizations within the five Central Asian Republics in order to improve and enhance partnership relations. The survey was designed to study the status of non-governmental environmental organizations, their needs, capacity and mechanisms of cooperation with them.

This experience is the first stage of such joint activities with the colleagues from the RECs in other regions.

The survey covered over 150 NGOs and initiative groups implementing environmental programs in Central Asia.

The questions of the survey were developed in cooperation with the experts from the other RECs.

In developing the survey we made an attempt to embrace all of the principal trends of NGO activities.

It is noteworthy, that the findings will serve as a basis in identifying the priorities for the future grant program and NGO partnership planning, which will incorporate a variety of joint activities, training events and information support.

Another valuable outcome of the survey is the NGO database that includes information describing the major focus of activity of various non-governmental organizations and their contacts. These data will enable NGO capacity enhancement in the CA in terms of cooperation with other organizations.

What you see is the result of the joint effort implemented by the CAREC and the NGOs in our region.

We are very hopeful that the findings we obtained will unite us in our environmental efforts and strengthen our partnership, which is essential for implementing our high and dignifying mission.

ENVIRONMENTAL NGOs IN CENTRAL ASIA PERSPECTIVES AND PRIORITIES

In summer 2002, the Regional Environmental Center for Central Asia supported by the United States Environmental Protection Agency (USEPA) launched the Central Asian Environmental NGO Survey Project.

BACKGROUND

The survey was designed to identify the major priorities of NGO activities in the CA region, to explore the status, needs and issues of NGO interaction with donors. Further more, the survey

was meant to shape the prospects and priorities for interaction among the CA environmental organizations at the local and regional levels.

The survey covered 158 non-governmental organizations and initiative groups involved in environmental programs all over the Central Asian Republics. The number of interviewees amounted to 27% of the total number of environmental NGOs entered into the CAREC's database. The sampling is representative and objectively reflects the actual situation in the market of

environmental NGOs of the Central Asian region.

First of all, the target group was specifically defined. The survey included not only the registered organizations, but also the initiative groups involved in individual environmental projects. 55.2% out of all interviewed organizations referred to environmental programs as their primary focus, 15.5% as their only focus and 25% as a complimentary focus. In average, every sixth organization interviewed is specifically specializing in the area of environmental protection.

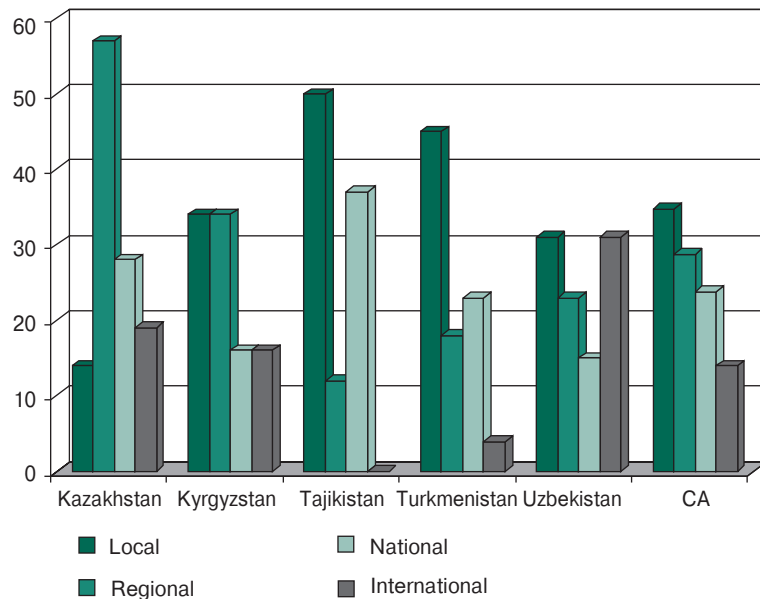

More than half of the CA public environmental organizations (60%) identify themselves as organizations of citizens interested in environmental protection; 13.6% identify themselves as a group of experts, 13,5% as a public fund and 9.6% as a branch of an international (network) organization.

The survey shows that the CA NGOs implement primarily the research projects, address environmental education, monitoring and information dissemination.

SCOPE

35% of NGOs in Central Asia are active specifically at the local level (individual villages and towns); 29% at the regional level (one country region); 28 % at the national level and 14% at the international level.

Figure 1 Territorial level of the environmental NGOs activity

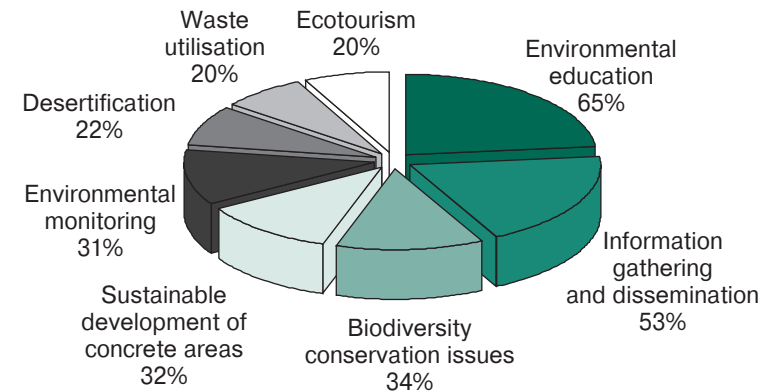

The CA environmental organizations implement their activities in a wide range of areas. The priorities related to selecting the primary areas of

activity for various countries are country specific. This process is affected by both biocenosis localization within a given country and acute environmental problems, distinctive landscape conditions, public policy and, to some extent, donor agencies' policy.

In general, NGO priorities in the Central Asia break down as follows:

Figure 2 Environmental NGOs activity priorities

In addition, 20% of the organizations are interested in ecotourism development in their regions and addressing wastes recycling problems.

Less than 20% of NGOs are involved in development of environmental draft laws and conservation in their regions.

Approximately 10 % of the surveyed organizations conduct public reviews,

are engaged in the area of forestry and implement water resource protection, energy and energy efficiency programs.

Only 2.4% of interviewees are focused on developing economic tools to ensure sound nature management.

Based on the survey, we singled out a number of topics of interest for the interviewees:

- 58%** «Environmental Education»
- 42%** «Environment and Health»
- 33%** «Environment Impact Assessment»
- 29%** «Development of Local Environmental Action Plans»
- 29%** «Environmental Law»
- 25%** «Ecotourism Development»
- 23.5%** «Relations between Businesses and Environmental Protection»
- 19%** «Aarhus Convention»
- 17%** «Water Resource Management»
- 13%** «Integrated Mountain Ecosystem Management»
- 13%** «Mass Media and Environmental Protection»

The interviewees were found to be less interested in the following topics: «Economic Tools of Environmental Management», «Climate Change and Energy Efficiency, Clean Technologies, Regional Conflicts and Their Impact upon Environment».

ENVIRONMENT AND INTERACTION

Generally, the CA public organizations consider themselves to be sufficiently recognized by the society. Thus, 66% of public environmental organizations have cooperative interaction with other NGOs; such cooperation is most developed in Kazakhstan. 61.5% of NGOs cooperate with government agencies, 48.2% with the local authorities. The local population is supportive of the initiatives put forward by half of public organizations (48.4%), businesses provide support to more than 38% of organizations.

Some interviewees indicated that they appear to interact with over 2000 of target group representatives. Cooperation with other NGOs at the national level is built on personal contacts, joint activities and information sharing.

Interaction with international NGOs is more typical of Kazakhstan, where one third of the interviewed organizations runs joint projects with partners from other countries. Interaction among NGOs in other countries is limited to information sharing and personal contact.

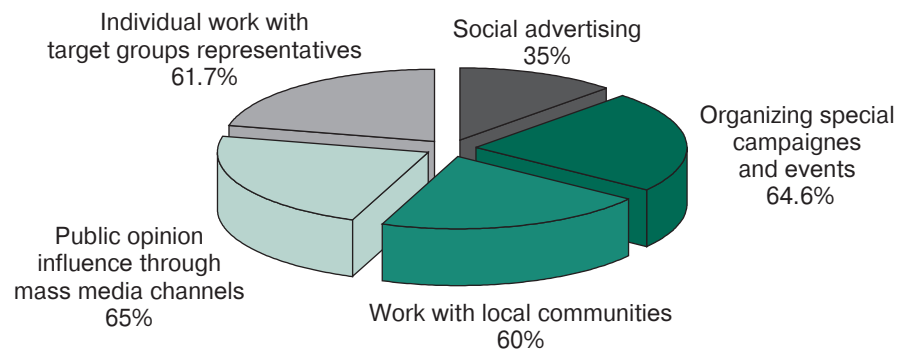

In terms of cooperation between the CA NGOs and government agencies, the partnership relations are found to be as follows:

- 38%** of organizations are involved by the government agencies as experts or consultants in the area of environmental protection;
- 29%** are invited to participate in public councils;
- 26.5%** are provided with premises;

Only 4% of organizations receive financial support from the government (in particular, in Kyrgyzstan).

Most of the organizations interviewed within the survey have a goal of influencing public opinion in the area of environmental protection. The following strategies are suggested as influence tools:

Figure 3 Public opinion influence methods

In addition, NGOs independently disseminate information on environmental issues related to their country or regions, implement environmental education programs, conduct trainings, some of them work on establishing NGO coalitions and networks, including the international ones. Some of the organizations are engaged in law making and lobbying. Protesting is actively used by a few organizations only.

INSTITUTIONAL DEVELOPMENT

The recent years have been marked by the active growth and development of environmental organizations. This is related to the enhancement of public environmental movement in the province, retargeted donor priorities in terms of financing the field activities and the growth of non-profile organizations (women's, youth NGOs), which are getting more actively involved in environmental problems.

The outcomes of the survey show:

- 47%** of NGOs have been around for less than 3 years
- 38%** for less than a year
- 15%** have been active for over 3 years.

The following criteria have been emphasized as organization success indicators:

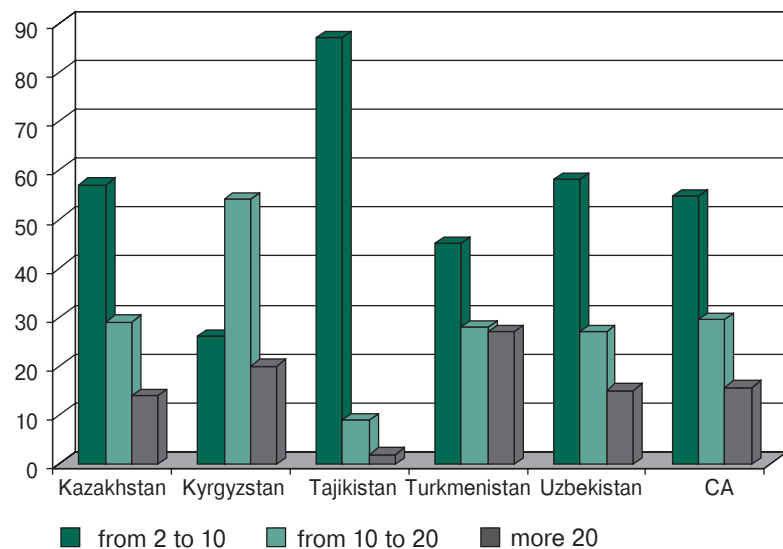

- 40%** of NGOs believe that any organization becomes successful if it is able to continue its activities without donor funding
- 30%** of interviewees see organizational success in positive feedback received from the community in relation to the organization's activities
- 25%** of interviewees measure their success against the number of projects they have implemented
- 6%** of interviewees suggest that an organization operates successfully if it's a part of any public organizations' network or has extensive contacts.

HUMAN CAPACITY

Any organization is, first of all, the people who are working for it. Practice shows, that environmental organizations include people of various occupations, they do not necessarily have an environmental background, but may include biologists, geologists, journalists, engineers, school and university teachers, etc.

The organizations have been found to have an average of 2 to 10 people on staff. This holds for 54.6% of organizations, 29.4% of NGOs have 10 to 20 people on staff and 15.6% of NGOs have over 20 people on staff.

Figure 4 Average number of organization staff

A mention should be given to the fact that many interviewees had some difficulty answering the question related to the number of staff working for a given organization. In particular, many survey participants confused the concepts «employee», «volunteer» and «target group representative».

Volunteers represent a significant share of the CA environmental NGOs (up to 40%). They are interested in addressing the environmental issues; various organizations may have 15 to 2000 volunteers.

The survey included a question on gender balance; however, most of the interviewees couldn't give an answer to it.

17% of NGOs still face the problem of low employee qualification.

16% still have the problem of manpower drain unresolved, while 11% have a problem with ensuring volunteer support.

Weak organizational management has been underlined by only 5% of the interviewees.

OFFICE FACILITIES AND EQUIPMENT

The biggest concern among the internal NGO problems preventing them from effective development was said to be the lack of communications and office equipment.

34% of the interviewees quoted it as the most serious problem. Technical equipment is an important component for NGOs, contributing to their capacity building and affecting the scale and type of their activities.

In view of the fact that most of the organizations are active in the area of environmental education, information gathering and dissemination, it's quite natural that they need computers (42%) and copiers (52%) to produce and duplicate informational materials. In addition, uninterrupted access to the latest information and dissemination of their own updates, coordination of activities with their partners within and outside of the country are impossible without modern communications facilities: fax (42%), modem (32%) and telephone (16%). In order to ensure larger outreach for their projects, many environmental organizations produce commercials and documentaries, film certain footage and need digital video equipment (47%), which would enable them to edit their materials on their own.

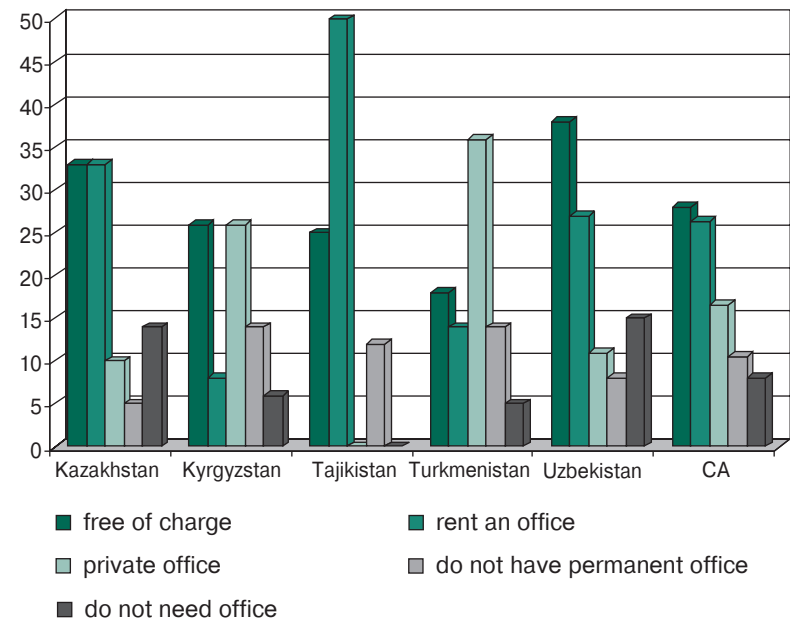

One third of the organizations indicated that in order to increase their efficiency they need a car, a digital camera – 18%, a scanner – 9%, risograph – 2%.

The need for special scientific laboratory equipment was mentioned by only 3% of the organizations.

While assessing NGO capacity, it's important to consider the working

conditions of the employees: 28% of the CA environmental NGOs use their facilities for free, 26.4% rent their office space, 16.6% have their own office, 10.6% need office space but don't have it. Such organizations rent office space or work out of their employees' apartments, 8% of the organizations do not need office space.

Figure 5 Offices availability for Environmental NGOs

The survey findings indicate, that the NGOs covered in the survey received their offices from the government agencies for free. This holds for Uzbekistan and Kyrgyzstan.

DEVELOPMENT AND INTERACTION PROBLEMS

23% of the interviewees stressed, that effective development of the public environmental movement is hindered by the lack of established contacts with other environmental NGOs.

There is a number of other external problems that have been found:

- 27.4%** passive position of environmental movement in the country
- 22%** non-observance of laws
- 13%** registration related problems (the most traditional problem for Turkmenistan) and imperfect laws
- <10%** problems related to underdeveloped social partnership and high taxation for public organizations

Information Support

Most of the organizations believe that information about the activities of the local and international NGOs could significantly improve their work. The lack of information is mostly experienced by NGOs in Turkmenistan and Tajikistan. Over one third of the interviewees complained of unavailability or difficulties in obtaining information about the activities of the local and international NGOs. It needs to be mentioned that 30% of the interviewees think that the information flow available to them with respect to the environmental issues is not useful enough.

The environmental NGOs' employees need the following literature:

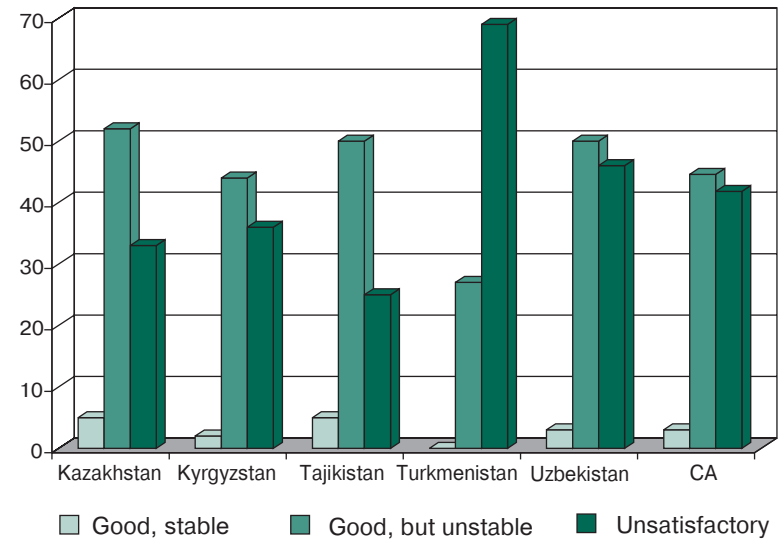

- 80%** specialized literature in the area of environmental protection and ecology
- 72%** reference books

- 70%** project overviews, NGO analytical materials
- 66%** legal literature
- 53%** materials related to the tools of NGO management and organizational development is needed of the interviewees.

Funding

Over 40% of the interviewees referred to the problem of insufficient funding as one of the development constraints. 42% of the organizations think that their funding is unsatisfactory, 45% think it's good but unstable and only 3% think that it's «stable and good».

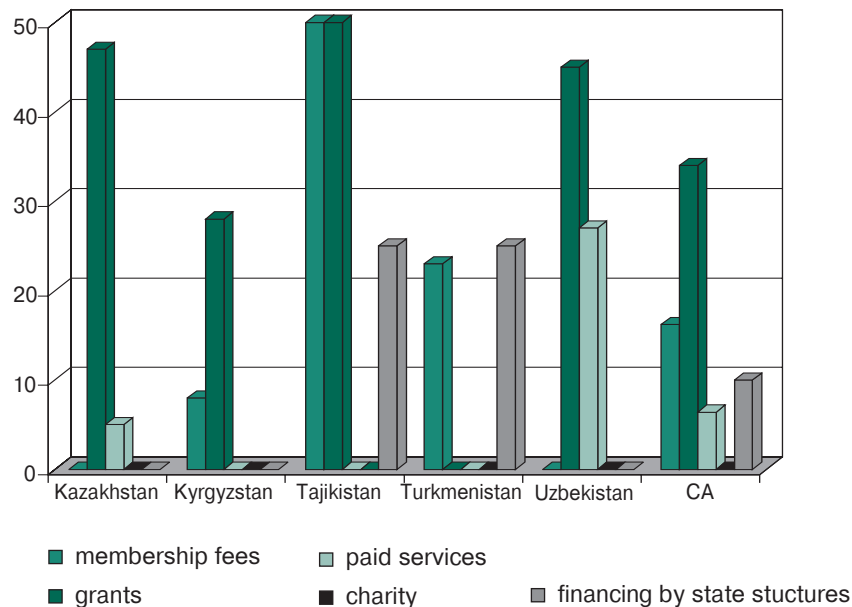

Figure 6 NGOs financial status

Currently the CA NGOs use the following sources of funding:

- 34%** of the NGOs are primarily funded through the donors. Membership fees are collected by
- 16%** of the organizations
- 10%** of the organizations (primarily the NGOs of Turkmenistan and Tajikistan) are funded from the budget
- 6.4%** of the organizations provide charged for services to their target group.

Figure 7 NGOs main financing resources

NGOs – DONORS INTERACTION

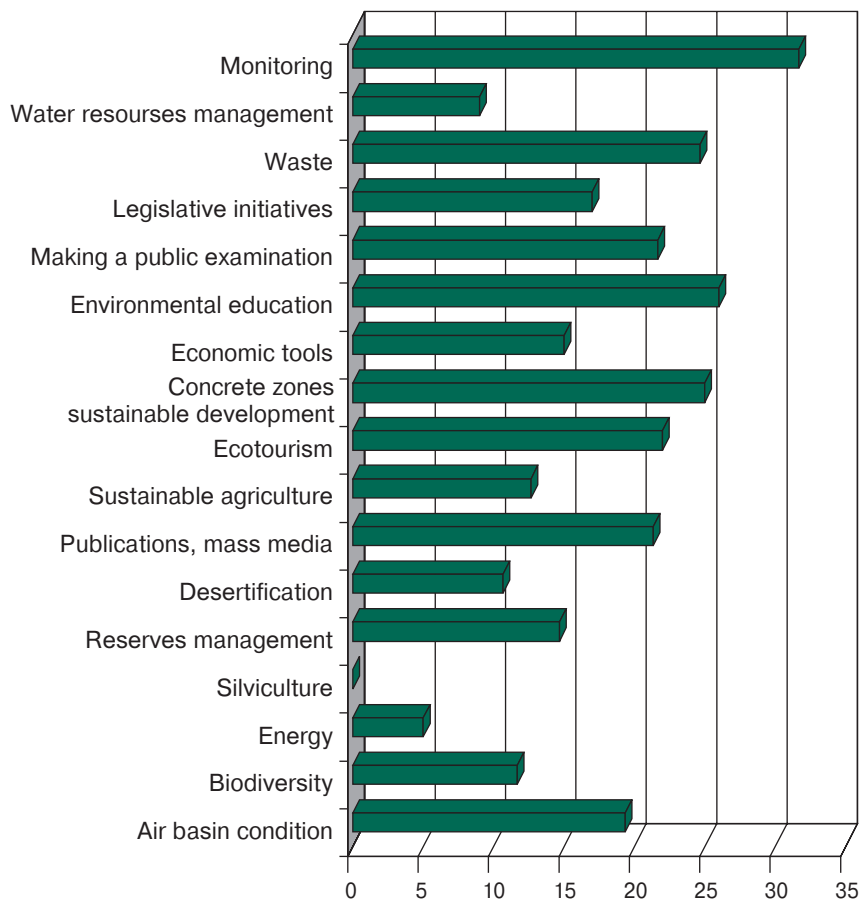

The focus of the CA environmental NGOs activities is in many ways shaped by the grant policy of the donor organizations. Funding, and, therefore, an opportunity to implement their activities is provided to those NGOs, whose mission is compatible with the policy of the funds. However, if the funds do not conduct any monitoring of the social and environmental problems in a given region, it may lead to a situation, when the most pressing problems in the region do not receive enough attention from public organizations. Often those organizations, which address the pressing issues in the region without donor support do not operate effectively enough, as they devote the larger part of their time and effort to searching for the resources to keep their organization afloat.

According to the interviewees, the following directions of environmental NGOs' activities do not receive sufficient funding from donor organizations:

- 30%** environmental monitoring
- 26%** environmental education
- 25%** sustainable development of individual areas
- 22%** public examinations
- 22%** environmental tourism development
- 21.3%** publications, production of specialized literature

In their opinion, the following issues do not receive enough attention either: monitoring of the air, improvement of economic tools for sustainable development, conservation, desertification, sustainable agricultural development, biodiversity preservation.

Figure 8 NGOs activity direction that lack donors' financing

In the questions related to NGO – donor interaction, we asked the NGOs to come up with their priorities for assessment of the projects targeting external funding.

The following are the priorities that have been identified: according to the NGOs, the projects aimed at specific environmental activities should have the largest priority (37%), as well as the project designed to encourage public participation (24%). Such directions as looking for the alternatives and addressing environmental problems in the Central Asian region, identifying internal environmental problems in the countries and NGO institutional development are considered to be less important – 8%.

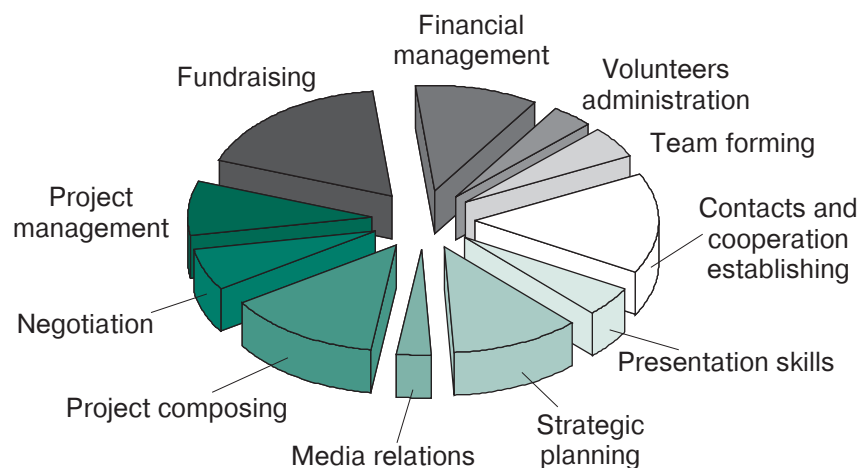

Non-Financial Assistance

The environmental NGOs in Central Asia are mostly interested in those types of non-financial assistance that will further increase the chances of receiving funding or other resources, which would include establishing direct contacts with the donors, obtaining information about grant announcements and searching for foreign partners.

71% of the interviewees are interested in receiving external assistance for advanced training of their employees. The following topics have been recognized to be the most relevant:

- 54.6%** «Resource and Fund Raising»
- 47%** «Establishing Contacts and Cooperation»
- 42%** «Project Development»
- 36%** «Strategic Planning»
- 33.4%** «Fundamentals of Financial Management»

Figure 9 Demand and need in NGOs staff education

In addition to advanced training for their staff, the NGOs are interested in bringing in NGO development experts and consultants – 41.4%. External assistance is also needed in developing projects to be submitted to the international agencies – 38% and conducting events and activities – 23%. 19% of the interviewees need legal services, 15% need independent project assessment.

19.5% of the interviewees expressed their interest in attending the trainings conducted by donors.

8.25% of the organizations are interested in NGO support in environmentally stressed regions.

6.5% would like to get assistance in looking for the partners in the Central Asian region.

4.5% are interested in the development of regional links.

According to the interviewees, the major problem in NGO – donor relations is incompatibility of donor goals and NGO goals – 44.4%.

The second most important problem is the problem of limitations for salaries in grants– 38%. This is quite evident, as working for an NGO is the only source of income for many employees of public organizations.

These are followed by:

26% «Percentage limitations for the grant budget allocations»

18% «Incompatibility of donors' goals and the interests of the region and the country in general»

25% «Varying deadlines for project submission and providing a response related to the project»

The CA environmental NGOs would give preference to the following ways of obtaining information about grant announcements:

46.6% via e-mail

24.6% via publications in specialized bulletins

18% via personal contacts

10% via announcements in the mass media

7.4% via notices posted on the web-sites of the donor organizations.

In the whole, the outcomes of this survey and a series of consultations demonstrated that the involved parties exhibit a great interest in analyzing the situation with environmental movement in CA. The increased influence of public organizations upon civil society development is an important indicator of democratic principles in the CA countries.

We hope these findings will allow for practical consideration of NGO interests and opinions while formulating the regional programs of nature preservation for sustainable development in Central Asia and will, accordingly, contribute to the sustainable development of the NGOs and enhanced cooperation at the regional level.

We would like to thank all those who have been assisting in this research implementation: Centre for Public Development «ACCORD» (Republic of Kazakhstan), Resource Center of Ecoforum NGO RK (Republic of Kazakhstan), «Ecoforum» NGO (Uzbekistan), «Turkmenistan EcoNGOs Association» Ecocentre (Turkmenistan), CAREC Tadjikistan venture (Tadjikistan), CAREC Kyrgyz venture (Kyrgyz Republic).
